Donating a kidney is major surgery but has not been shown to reduce the donor's life expectancy. In pursuing a transplant, there are two options: a deceased donor transplant or Donor List living donor transplant. If you are interested in donating blood and platelets, contact a blood donation organization. ByZhaiYunTanSeptember1, Living donors may face a 25 to 35 percent permanent loss of kidney function after donation on average, but their risks of getting end stage renal disease less than 1 percent 15 years after the donation. Additionally, Donor List patient outcomes from transplants facilitated by the National Kidney Registry exceed the average U.

Notonlydoestimematterbutthedonor-recipientmatchalsomatters.Receiv a preemptive transplant and never going on dialysis leads to higher transplant success rates.
