Due to the specific location of cardiac cysts in areas which may result in functional impairment, such as the cardiac conduction system, and because of the limited capacity for expansion in contrast to organs such as liver or lungage of onset is younger than for classical CE, with onset of symptoms between the 2nd and 4th decade. Zozor, et al.

Bhide, B. This high incidence is probably due to the high incidence of coexist Warren, P. Gong, F.

Since the majority of pulmonary embolic come from liver cyst rupture near the

artery embolization with micron particles and 9-mm coils. Rates of IVC filter insertion seem to vary significantly from one institution to another, suggesting that whether or not patients with similar clinical characteristics receive an IVC filter is based largely on local clinical practice
